

EV Group and Toppan Photomask join forces to accelerate market adoption of nanoimprint lithography for Photonics manufacturing – September 23, 2022

Imaging radar, a leap forward for driving automation – An interview with Uhnder

The automotive radar market remains highly dynamic, with an expected 14% CAGR at both the system and silicon levels, announces Yole Intelligence in its [Radar for Automotive report](#) (2022 edition). This evolution is driven in volume and value by solid market drivers, those of safety regulations and driving automation. However, the industry is entering a paradigm change as cost optimization will no longer be the central focus.

GO DEEPER WITH YOLE'S ANALYSIS

Radar for Automotive 2022

Imaging radar will drive the next growth wave and reach \$4.3B by 2027, equating to 30% of the total radar market.
