PMT orders maskless lithography system from EV Group - January 24, 2024

PMT has ordered a LITHOSCALE® maskless exposure system from EVG. The LITHOSCALE system will be installed at PMT's headquarters in Asan-si, Chungcheongnam-Do, South Korea, where it will be used in the production of next-generation MEMS-based probe cards for wafer-level testing of advanced NAND, DRAM and HBM devices. Incorporating EVG's MLE™ (maskless exposure) technology, LITHOSCALE addresses lithography needs for markets and applications that require a high degree of flexibility or product variation. LITHOSCALE tackles legacy bottlenecks by combining powerful digital processing that enables real-time data transfer and immediate exposure, high structuring resolution and throughput scalability. It is ideally suited for rapid prototyping, providing fast turnaround and R&D cycle times.
